Semana de Conocimiento de OCI Data Platform

Semana de Conocimiento de OCI Data Platform

Resumen de la Plataforma de Datos

¿Cuáles son las principales **Arquitecturas de Datos?**

Data Warehouse

Data Lake

Data Lakehouse

Data Warehouse

Almacena datos estructurados
organizados para análisis e
informes rápidos.

+

Data Lake

=

Data Lakehouse

Data Warehouse

+

Data Lake

=

Data Lakehouse

Almacena datos sin procesar,
estructurados y no estructurados,
a gran escala y con flexibilidad.

Data Warehouse

+

Data Lake

=

Data Lakehouse

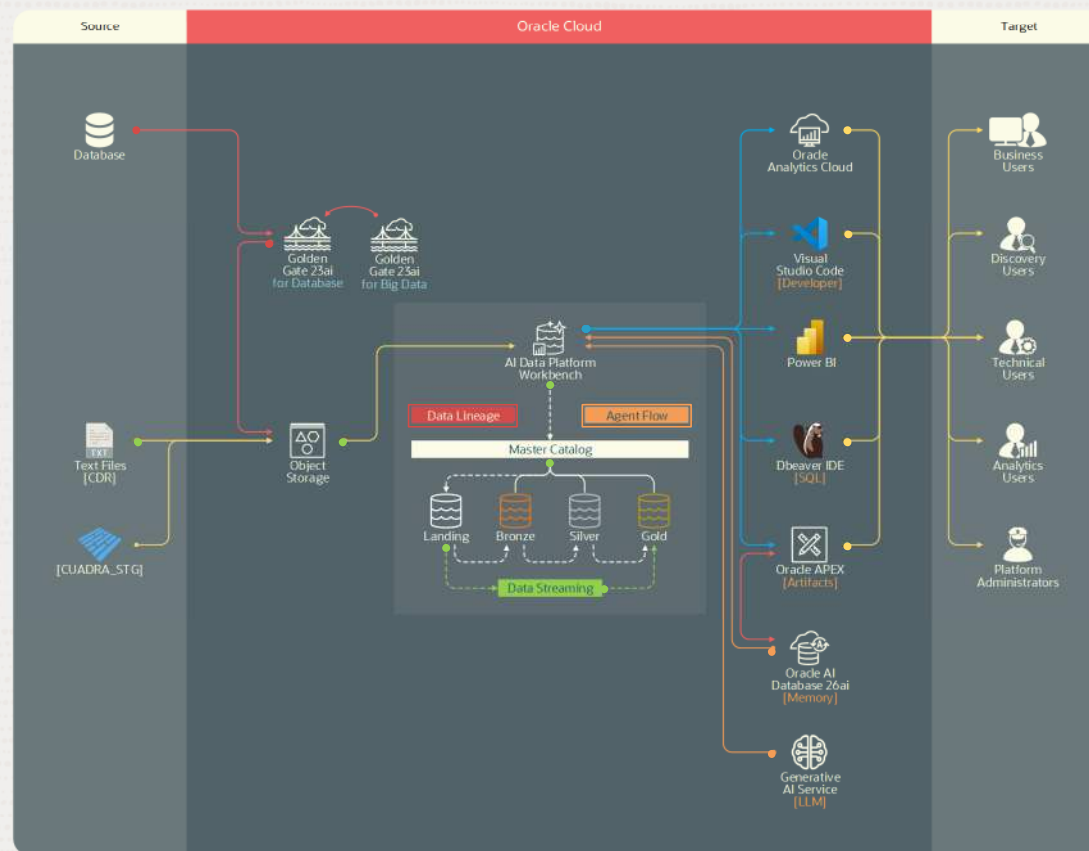

Combina el almacenamiento flexible del Data Lake con las capacidades analíticas del Data Warehouse.

Arquitectura de Referencia Oracle (Lakehouse)

Descripciones de los componentes usados:

- ✶ **Object Storage:** Punto de entrada para almacenar archivos en Oracle Cloud y ponerlos a disposición de los procesos de integración y análisis de la plataforma.
- ✶ **Oracle GoldenGate:** Replica y sincroniza los cambios de la base de datos de origen en tiempo real o near-real-time hacia Oracle Cloud, desacoplando la fuente de los procesos de carga y procesamiento de AI Data Platform.
- ✶ **Data Platform Workbench:** Integra, transforma y administra los datos bajo una arquitectura Lakehouse.
 - **Landing / Bronze / Silver / Gold:** Organiza los datos por niveles de procesamiento, desde la información original hasta datos refinados y preparados para su consumo.
 - **Master Catalog:** Centraliza y gobierna los metadatos de la plataforma. Permite administrar tablas Managed y External, con formatos como CSV, JSON, Parquet, ORC, Avro, Text, Delta e Iceberg.
 - **Data Lineage:** Mantiene la trazabilidad del origen de los datos y de las transformaciones realizadas durante su procesamiento.
 - **Agent Flow:** Permite construir flujos de agentes que utilizan los datos de la plataforma junto con capacidades de Inteligencia Artificial.
 - **Data Streaming:** Gestiona la ingesta y el procesamiento continuo de datos en tiempo real, habilitando su distribución y evolución desde Landing hacia las capas Bronze, Silver y Gold.
- ✶ **Oracle AI Database 26ai:** Proporciona persistencia y memoria para las soluciones de IA.
- ✶ **Generative AI Service:** Proporciona acceso a modelos LLM que pueden ser utilizados por los agentes para interpretar información y generar respuestas basadas en los datos.
- ✶ **Oracle Analytics Cloud:** Consume la información procesada por la plataforma para crear dashboards, indicadores y visualizaciones orientadas al análisis y la toma de decisiones.
- ✶ **Visual Studio Code:** Entorno de desarrollo utilizado por perfiles técnicos para desarrollar, integrar y mantener componentes y artefactos asociados a la plataforma.
- ✶ **Power BI:** Herramienta de visualización y análisis que consume los datos preparados por la plataforma para la construcción de reportes, dashboards e indicadores.
- ✶ **DBeaver IDE:** Herramienta de acceso y administración de bases de datos utilizada para consultas SQL, exploración de estructuras y validación técnica de los datos.
- ✶ **Oracle APEX:** Plataforma low-code para desarrollar aplicaciones y artefactos que consumen los datos y servicios disponibles en la arquitectura.

AI Data Platform Workbench es un entorno de desarrollo donde los **ingenieros de datos**, **científicos de datos**, desarrolladores y administradores de datos pueden crear y **gobernar lakehouses**, aplicaciones y agentes de IA

Integración nativa con soluciones Fusion

Data Integration

- Conectividad con cualquier fuente
- Acceso en tiempo real a las fuentes o ingesta en el Lakehouse
- Intercambio de datos sin ETL desde la plataforma de datos Fusion y Health AI

Oracle Conectivity

- Deep integration with Oracle technologies
- Native connectivity with Oracle applications

Workflows

Always Free AI Resource Limit Update

Always Free Ampere AI Compute entitlements have changed. This update does not affect your paid resources, existing paid workloads or bill. Contact support for further questions.

El ML nunca fue tan fácil

Data Engineering & Data Science

- Entorno de desarrollo integrado (IDE) unificado para ingeniería y ciencia de datos
- Opciones de cómputo flexibles
- Compatibilidad con desarrollo en varios lenguajes
- Orquestación unificada de flujos de trabajo

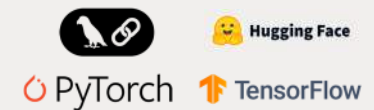

Facilidad para crear agentes de IA

AI Agents & Applications

- Desarrollo de IA de bajo código y centrado en el código
- Integración con OCI Generative AI y Oracle Database 23ai
- Gestión del ciclo de vida de los activos de IA
- Integración con Fusion AI Agent Studio

GenAI LLMs

Tutoriales

Videos

Learn about Oracle AI Data Platform by watching these videos.

Sort by Featured Title

How to Create an AIDP Connection Using OAC Native Connector

In this demo, you learn how to create a secure, native connection from Oracle AI Data Platform Workbench to Oracle Analytics Cloud using the Oracle Analytics Cloud native connector. This connection lets you access, analyze, and visualize curated data from Oracle AI Data Platform Workbench in Oracle Analytics Cloud, or OAC without manual exports or complex integrations.

For more information, see the [documentation](#).

How to Build a Basic Medallion Architecture in Oracle AIDP Workbench

In this tutorial, you will learn how to design a basic Medallion Architecture in Oracle AI Data Platform Workbench. See step-by-step instructions for uploading supplier data, structuring workflows with catalog management and schema design, and transforming and enriching data through generative AI prompts. The demo covers preparing data in the Bronze layer, transforming and validating it in the Silver layer—including AI-driven augmentations such as generating continent values and review sentiment—and curating trusted Gold layer datasets for analytics and business reporting.

For more information, see the [documentation](#).

How to Create an Instance in Oracle AI Data Platform Workbench

In this step-by-step tutorial, learn how to create an instance in Oracle AI Data Platform Workbench—a unified and secure workspace for data integration, model development, and analytics collaboration. The video demonstrates the process from selecting the right compartment and configuring access policies to naming and creating a dedicated environment for your projects. Understand how compartments organize resources, why proper IAM permissions are required, and how to set policies to manage user access while maintaining security. Once the instance is created, teams can ingest data, build AI models, and develop analytics in a controlled, role-based environment. The video also provides tips for optimizing permissions and streamlining resource organization.

How to Create and Assign Roles in Oracle AI Data Platform Workbench

Oracle experts guide viewers through managing system roles—such as admin and auditor—delegating responsibilities, and cascading permissions efficiently. See how to add users by username or OCID, assign data engineer roles, and apply best practices for controlling data access. Gain insights into auditing, permission inheritance, and the impact of role assignments on data governance. Oracle AI Data Platform Workbench empowers administrators to safeguard sensitive data and streamline teamwork while maintaining robust access controls. For more videos and detailed resources on secure data management, explore the links below.

For more information, see the [documentation](#).

How to Organize Data with Catalogs and Schemas in Oracle AI Data Platform Workbench

This comprehensive demo walks through creating both standard and external catalogs, connecting external data sources, and managing different data types. Viewers learn to establish and configure schemas, import tables, and manage volumes, ensuring efficient collaboration for team-based workflows. The tutorial also explains catalog types and demonstrates practical steps for maximizing Oracle AI Data Platform Workbench for enterprise-scale analytics. Discover best practices for building a unified data environment and enabling faster business insights.

↑ Oracle AI Data Platform Essentials: Training and Assessment

Enroll in this path

Learning Path

Status
Not Started

This learning path is designed to introduce learners to the core concepts, architecture, and capabilities of Oracle AI Data Platform (AIDP), this offering explores how to organize projects, apply policies, and build data lakes that support analytics and AI workloads.

It is intended for data professionals who are new to Oracle AI Data Platform and want to build a strong foundation for governed enterprise-ready data operations.

Take the assessment at the end to earn a badge.

Cómo Experimentar

Cloud >

Oracle Cloud Free Tier

Build, test, and deploy applications on Oracle Cloud—for free.

Start for free

Sign in to Oracle Cloud

Here is how Oracle Cloud Free Tier works

1

Start with a **US\$300 cloud credit.***
You'll have 30 days to use it to test your applications on all OCI services, in addition to Always Free Services in your Free Tier account.

2

At any time during or after the 30-day period,* switch to a **Pay As You Go** account. Pay only for services that exceed the monthly free amounts from Always Free Services.

3

If you do nothing after 30 days, you'll continue to get Always Free Services in your Free Tier account.

¡Gracias!
